

Company Profile: Coperion

As a global industry leader, Coperion excels in the development and production of compounding and extrusion systems, size reduction, washing, separating, drying, and agglomeration, feeding, weighing, material handling, and pneumatic conveying systems. We also specialize in milling, mixing, thermal processing, dust collection, and other services.

With a rich history in Polyolefin processing, Coperion is renowned for its post-reaction extrusion, material handling, and additive feeding solutions. All our major components are manufactured at Coperion's numerous production facilities worldwide.

Coperion's commitment to innovation is demonstrated by the continuous investments in R&D and innovative technologies. Among Coperion's recent introductions are a 1000 KTA PE single line production post-reaction and a single line color compounding for pipe grade materials.

Coperion empowers customers with innovative solutions that enhance their market competitiveness.
